

Features

- Up to 3 Watts in a 0.80" x 1.25" x 0.28" case
- Low Cost
- Standard Pinout
- Wide Input Range
- High Efficiency
- Fully Isolated, 1544 VDC
- Fully Self contained,
No External Parts Required for Operation

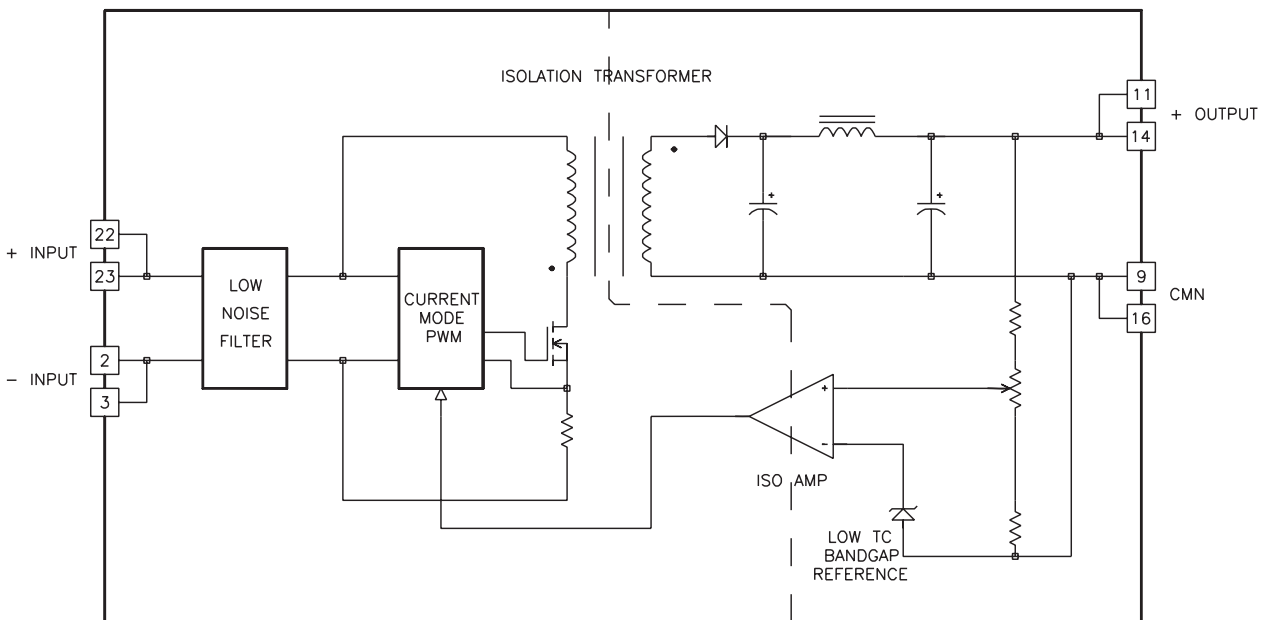

Description

These 3 Watt DC/DC converters were designed for fast integration with your system's power needs. With no external components or filtering necessary for all but the most critical applications, these converters can provide power instantly. This saves you costly engineering time required to design your system around the power converter.

Recommended Fuse		(3)				

NOTES

- * All parameters measured at $T_{AMB} = 25^{\circ}\text{C}$, nominal input voltage and full rated load unless otherwise noted. Refer to the CALEX Application Notes for the definition of terms, measurement circuits and other information.
- Noise is measured per CALEX Application Notes. Measurement bandwidth is 0-20 MHz for peak-peak measurements, 10 kHz to 1 MHz for RMS measurements. Output noise is measured with a $0.01\mu\text{F}/100\text{V}$ ceramic capacitor in parallel with a $1\mu\text{F}/35\text{V}$ Tantalum capacitor, 1 inch from the output pins to simulate standard PCB decoupling capacitance.
 - External fusing should be used for system protection due to a catastrophic failure. See CALEX Application Note 9 in the Calex DC/DC Catalog to determine correct fuse.
 - The case thermal impedance is specified as the case temperature rise over ambient per package watt dissipated.
 - Specifications subject to change without notice.
 - Requires minimum load to regulate. No harm to the unit when operated at less than minimum load.
 - Water Washability - Calex DC/DC converters are designed to withstand most solder/wash processes. Careful attention should be used when assessing the applicability in your specific manufacturing process. Converters are not hermetically sealed.

General Specifications			
All Models			Units
Isolation			
Input to Output Isolation, 10 μ Leakage V nom = 12V, 24V V nom = 48V	MIN	700	VDC
	MIN	1544	VDC
Environmental			
Ambient Operating Temperature	MIN	-40	°C
	MAX	+85	
Case Operating Temperature	MIN	-40	°C
	MAX	+105	
Storage Temperature	MIN	-40	°C
	MAX	+125	
Thermal Impedance (4)	TYP	30	°C/watt
Cooling	Free-Air Convection		
General			
Case Size	1.27 x 0.74 x 0.28 in 32.3 x 18.8 x 7.1 mm		
Case Material	Non-Conductive Black Plastic		
Weight	8g		

Mechanical tolerances unless otherwise noted:
 X.XX dimensions: ± 0.020 inches
 X.XXX dimensions: ± 0.005 inches
 Pin location shown is for mating PCB.
 The case is plastic with a non-conductive header.

APPLICATION NOTE

Start-up: A minimum load is required for the LCS to have a nominal output. The specification indicates a minimum load of 10% of the maximum load, but will usually start with less. The type of load will also vary the start-up characteristics. Such as an electronic load or some types of active circuitry (vs. a pure resistive load) will require more load for start-up.

Each application should be verified and an additional resistive load added if needed.

The output may be in a burp mode (output pulsing) with less than a minimum load, causing the output voltage to vary.
